

2017 CHEMISTRY BRIDGING COURSE

	9-10.30 am	11am-12.30pm	Lunch	1.30-2.45pm	3-5pm
Wednesday 1st February	Lecture 1 (AG)	Lecture 2 (AG)		Lecture 3 (AG)	Tute on lectures 1-3
Thursday 2nd February	Lecture 4 (EC)	Lecture 5 (EC)		Lecture 6 (EC)	Lab: Introduction (3-5.30 pm)
Friday 3rd February	Tute on Lectures 4-6	Lecture 7 (EC)		Lecture 8 (EC)	Lab: Acid-base titration (3-5.30 pm)
Monday 6th February	Tute on Lectures 7-8	Lecture 9 (KM)		Lecture 10 (KM)	Lab: Precipitation Reactions (3-5.30 pm)
Tuesday 7th February	Tute on Lectures 9-10	Lecture 11 (KM)	Ice Cream	Lecture 12 (KM)	Lecture 12 continued if needed Finish: 4.30 pm
Wednesday 8th February	Tute on Lectures 11-12	Lecture 13 (AG)		Lecture 14 (AG)	Lecture 15 (AG) Finish: 4.30 pm
Thursday 9th February	Tute on Lectures 13-15	Lecture 16 (JK)		Lab: Electron Transfer Reactions	
Friday 10th February	Lecture 17 (JK)	Tute on Lectures 16-17	BBQ lunch with Department & certificates	FREE	FREE

Lecturers:

(EC): Eleanor Campbell, eleanor.campbell@anu.edu.au

(JK): Joe Kaczmariski, joe.kaczmariski@anu.edu.au

(KM): Kathy Ma, chenxi.ma@anu.edu.au

(AG): Aidan Grosas, aidan.grosas@anu.edu.au

Tutors and lab demonstrators: Adam Mater, Sarah Campbell, Patrick Yates, Paul Marshall, Katelyn Wilson, Harrison Barnett, Di Tulip

A formal pre-lab will be given prior to each laboratory session.

Lecture	Topics	Learning Outcomes
1	<ul style="list-style-type: none"> *Classification of matter (BLB 1.2) *Chemical Foundation: elements, atoms and ions (BLB 2.6-2.7) *Atomic structure (BLB 2.1-2.3) 	<ul style="list-style-type: none"> *To understand the properties of matter and the definitions of elements, atoms and ions. *To learn about the internal workings of an atom.
2	<ul style="list-style-type: none"> *Introduction to the periodic table (BLB 2.5) 	<ul style="list-style-type: none"> *To be able to read the periodic table and understand the basis of the information presented. *To understand the features of the periodic table including the ability to predict the properties of elements in the table.
3	<ul style="list-style-type: none"> *Naming of (BLB 2.8) binary ionic compounds and binary compounds containing non-metals 	<ul style="list-style-type: none"> *To be able to name binary compounds and compounds that contain polyatomic ions. *To be able to write formulas from names and vice versa
Lab 1	<ul style="list-style-type: none"> *Equipment *Glassware *Safety 	<ul style="list-style-type: none"> *Identifying equipment and glassware in the laboratory *Safe handling procedures
4-6	<ul style="list-style-type: none"> *Information given by a chemical equation (BLB 3.6) *Chemical Composition *The mole and stoichiometry [DVD] (BLB 3.4) *Molarity (BLB 4.5) *Chemical reactions *Chemical equations and the balancing act (BLB 3.1.3.2) *Dilution (BLB page 128) 	<ul style="list-style-type: none"> *To understand these concepts and to apply them to the calculation of reaction yields and analytical measurements. *To learn to identify the characteristics of a chemical reaction and the information given by a chemical reaction. *To be able to write and balance a chemical equation.
7	<ul style="list-style-type: none"> *Limiting reagents in reactions (BLB 3.7) *Yields of reactions (BLB 3.7) 	<ul style="list-style-type: none"> *To understand how to predict the products of chemical reactions
8	<ul style="list-style-type: none"> *Acids and bases (BLB 4.3 and 17.1-17.5) 	<ul style="list-style-type: none"> *To understand how to predict how much product is produced by a reaction
Lab 2	<ul style="list-style-type: none"> *Acid base titrations (BLB 4.6) 	<ul style="list-style-type: none"> *To develop manipulations skills useful to chemistry *Practice balancing of equations and use of units

9	*Reactions in water solutions (BLB 4.1-4.2) and precipitation reactions (solubility rules)	*To understand the concepts of acids and bases. *To be able to calculate pH.
Lab 3	*Precipitation Reactions	*To use the solubility rules to predict the products of reactions *To practice balancing equations
10-12	*Modern atomic theory (BLB 6.1, 6.2, 6.4-6.9) *Ionic and covalent bonds (BLB 8.2-8.3) *Electronegativity and bond dipoles (BLB 8.4) *Lewis structures (BLB 8.5)	*To be familiar with each model of the atom. *To understand electron configuration *To understand the different types of chemical bonds.
Lab 4	* Electron Transfer reactions	*To apply theory used to practical application
13-15	*Oxidation and reduction reactions plus introduction to organic chemistry naming (BLB 4.4, 19.1-19.4)	*To understand the concepts of oxidation and reduction
16-17	*Introductory organic chemistry (BLB 22.1-22.7)	*To be able to draw and name simple organic structures.

References refer to

Brown, Lemay, Bursten *et al.*, *Chemistry: The Central Science* 3rd Ed., Pearson 2014

The text book is available as an ebook and as a hard copy. Both the ebook and the hardcopy can be purchased from the Pearson web page:

<http://www.pearson.com.au/9781442554603>

This text forms the basis of both Chemistry 1 and 2, and many of the examples, illustrations, and exercises used will be taken directly from them. It should be used extensively and intelligently to support and enhance your understanding of the subject.

A set of lectures notes and a lab manual will be issued at the first lecture.

Lectures: STB S1

Tutorials: Hancock 2.23-2.28

Labs: STB level 2 labs

STB: Science Teaching Building, 136 (Red Building)
